

# inet(6)num and aut-num reference to sponsoring LIR

---

Piotr Strzyżewski, Adam Osuchowski

Silesian University of Technology, Computer Centre

- 
- 
- not (yet) a formal proposal; just testing the waters
  - we are not sure if this is either Address Policy or Database WG topic (so it is here ;-))

## Reason(s)

---

- End User is able to obtain independent resources through some sponsoring LIR
- End User is able to announce these resources under its own AS
- End User (and sometimes his upstream) could be lazy ;-)

# Goal

---

- The goal is to make yet another point of contact by linking the reference to either sponsoring LIR or RIPE NCC in inet(6)num and aut-num

# Pros

---

- ❑ Contractual relationship between an End User and a sponsoring LIR or the RIPE NCC have been established
- ❑ Minimum requirements of this relationship is well known (RIPE-452)
- ❑ Another point of contact is known in case of any abuse

# Cons

---

- Proposed link could be used in the wrong way
